PROFESSIONAL SUMMARY

Through LatentView, built the MCP servers behind a **Claude agent in Microsoft Teams**, rolling out to **700 Veeam sales team members** in October 2026 after a **zero-error final UAT**. Embedded with the client, added grace-period windows for contract expiries to the churn logic. Engineered entity resolution across **1M+ records** for Veeam's revenue analytics.

CLIENT-EMBEDDED EXPERIENCE

LatentView Analytics, San Francisco Bay Area

May 2025 to Present

Revenue Intelligence, client-embedded (Veeam Software, Adobe, Intuit)

- Translate ambiguous business problems into analytic solution requirements inside each client team; at Veeam, partner with stakeholders across **6+ sales and business segments** and present findings to senior leadership.

Veeam Software (Feb 2026 to Present):

- Built and tested **3 MCP servers** (churn risk, customer 360 profile, CRM records from Salesforce-sourced tables in Databricks) with **15+ tools** behind a Claude agent in Microsoft Teams that maps each rep to their own accounts through their Teams sign-in; passed final UAT with **zero errors** ahead of an October 2026 rollout to **700 sales team members**.
- Found in an earlier UAT round that contracts expiring on the 29th usually roll into the following days, and added grace-period windows to the churn logic so those accounts were not flagged as churn risk by mistake.
- Built entity resolution in SQL and Python, applying probabilistic record linkage and statistical matching across **1M+ records** to improve matching accuracy by **about 30%** and produce the de-duplicated master dataset the revenue reporting runs on.
- Migrated the revenue reporting data architecture from legacy to next-generation Salesforce, re-engineering the KPI logic and reconciling each KPI against its legacy definition while rebuilding **15+ Tableau dashboards** the global sales organization uses daily, with no disruption to business-critical KPIs through the cutover.
- Built the Databricks pipelines (ingestion, transformation, delivery) that feed the revenue dashboards and forecasting models, processing **2M+ records** at **99%+ refresh reliability**.
- Embedded revenue forecasting and anomaly detection, plus natural-language querying and automated insight summaries with fallback handling for low-confidence outputs, in the reporting; together they cut stakeholder analysis and meeting-prep time by **about 10 hours per week**.

Adobe (Sep 2025 to Feb 2026):

- Wrote automation scripts, using agentic AI tools, that pull CPI (cost per install) for **4 regions** (AMER, EMEA, APAC, Japan) for week-over-week comparisons, and ran root-cause deep dives tying CPI swings to paid media spend for the mobile-analytics team.
- Built Power BI dashboards for MAU and CPI analysis with the mobile-analytics and lifecycle-marketing teams.
- Built an early dormancy detection model that Lifecycle Marketing used to prioritize retention interventions.

Intuit (May 2025 to Sep 2025):

- Automated sales and inventory analytics pipelines in Python with model retraining feeding the reporting dashboards, and applied fuzzy-logic deduplication to improve data matching; ran **10+ knowledge-transfer sessions** with the offshore team, backed by process documentation.

SHIPPED PRODUCTS (BUILT WITH CLAUDE CODE)

Tableau Workbook Auditor, tableau-lineage.com

2026

- Built a .twbx auditor that runs entirely in the browser with no backend, so the workbook is never uploaded; it flags unused fields and duplicate calculations and diffs up to **5** workbook versions. Shipped the same engine as an **11-tool MCP server** on npm, the official MCP Registry, a Claude Desktop extension and a Claude Code plugin.

HEOR Studio, heor-studio.andey-s.workers.dev

2026

- Built a health-economics protocol-to-code tool where an LLM only drafts a reviewable spec and deterministic emitters write the SAS and SQL; code generation requires an explicit human sign-off, and the tool refuses analyses it cannot compute honestly (**2,563 checks across 24 groups, 0 failing**).

Eigen-Rho, eigen-rho.com

2026

- Built and deployed a live SQL interview platform that grades each answer by running it on Postgres (PGLite), with its own schema and read-only role per case; load-tested at **20 concurrent distinct cases** with **0 errors**, a **14 ms p95** and about **1.2 GB** of memory.

EARLIER EXPERIENCE

Chryselys, Hyderabad, India

Nov 2022 to Aug 2023

Senior Analyst, Business Analytics

- Built provider identity resolution to NPI records for Prostate Radioligand Therapy providers and organizations, closing IQVIA data gaps with web scraping and fuzzy-logic matching and raising NPI mapping accuracy by **60%**.
- Designed wireframes, then built a validation interface that automated descriptive statistics and data-quality checks on incoming client data, replacing manual review.
- Built a patient-journey process tracing **10 key encounters** around each therapy administration date across integrated client and IQVIA data, and co-authored the patient-journey paper presented at the PMSA Annual Conference 2023.

ZS Associates, Pune, India

Mar 2022 to Nov 2022

Decision Analytics Associate Consultant

- Set up Salesforce data-governance processes after a gap analysis with business stakeholders, with Python/VBA automation that eliminated manual data-entry errors and saved **about 12 hours per associate weekly**.
- Took Salesforce-integrated workflows through requirements, user-acceptance testing and troubleshooting with onshore stakeholders, coordinating **5 associates**.
- Streamlined commercial data aggregation for Key Opinion Leader (KOL) targeting, contributing to a **15% increase** in targeted prescriptions in Q2 2022.

Mu Sigma, Bengaluru, India

Jan 2019 to Mar 2022

Decision Scientist

- Automated the recurring patient-pool extraction, cost, incidence, prevalence and survival-modeling workflows in Python and SAS, saving **1+ workday per project**.
- Built data-governance and QA workflows in SAS and Python that cut errors and analysis time by **over 90%**, with reusable scripts adopted across multiple teams.
- Built Kaplan-Meier and Cox proportional-hazards models on Flatiron oncology data (cohorts from Dx/Rx codes) comparing on-label and off-label outcomes, and helped reproduce a randomized melanoma trial's results from real-world data.

TECHNICAL SKILLS

- **AI Agents and MCP:** Claude API, Claude Code, MCP server design and publishing (TypeScript, Zod input schemas), tool API design, RAG, LLM output validation (human sign-off gates, low-confidence fallbacks)
- **Languages:** Python (pandas, scikit-learn), SQL (CTEs, window functions, query tuning), TypeScript, Node.js, React, SAS, R
- **Data Modeling and Pipelines:** entity and identity resolution (probabilistic record linkage, fuzzy matching), multi-tenant schema isolation (schema-per-case Postgres with read-only roles), KPI and metric logic, Databricks pipelines (ingestion, transformation, delivery), Salesforce data-architecture migration, data governance
- **Solution Delivery:** client-embedded discovery and solution design, AI-assisted prototyping, UAT, platform cutover (Salesforce migration), troubleshooting, knowledge-transfer sessions, privacy-preserving design, Cloudflare Workers, Docker, GitHub Actions CI, npm and MCP Registry publishing
- **Analytics and ML:** Tableau, Power BI, revenue and paid-media analytics, forecasting, anomaly detection, root-cause analysis

EDUCATION

Northeastern University (D'Amore-McKim School of Business), Boston, USA

Sep 2023 to Dec 2024

Master of Science in Business Analytics

International Institute of Information Technology, Bengaluru, India

Feb 2020 to Sep 2021

Post Graduate Diploma in Machine Learning and Artificial Intelligence

GITAM University, Visakhapatnam, India

May 2014 to May 2018

Bachelor of Technology, Electronics and Communication Engineering

CERTIFICATIONS AND AWARDS

- **Claude Certified Architect, Foundations (CCA-F), Anthropic, 2026.** Verify: verify.skilljar.com/c/k349stsp9ezx
- **Encore Award, LatentView Analytics, 2026:** certificate of appreciation for outstanding performance, April to June 2026, signed by the CHRO.
- **Impact Award, Mu Sigma, 2021:** one of the first members of the "Creating Order Out Of Chaos" (COOOC) initiative; with the team, created and implemented its governance framework.
- **Spot Award, Mu Sigma, 2021:** key contributor to the team's 2020 automation goals.
